## EXPERIENCE

**VBRATO, Ekko** May 2023 - Present  
Software Engineer Remote / US

- Paid music collaborations and song-cover campaigns for artists across the world.*
- Frontend leadership:** Built the Next.js frontend from scratch, establishing its architecture, shared design language, and reusable components, with a focus on fast page loads and polished user experience.
  - Payments and payouts:** Owned complete payment and payout integration work across backend, frontend and mobile, including secure custom checkout and international transactions (Stripe, Apple/Google Pay, credit cards, Stripe Connect).
  - Backend leadership:** Led backend architecture and delivery across both products, designing AWS services and GraphQL/REST APIs, establishing service boundaries, and shaping deployment and testing practices.
  - Data pipelines:** Optimized Soundcharts ingestion for 1M+ artists and 100M metrics, reducing monthly API requests from 25M+ to 11M and roughly halving provider costs; cut full processing time from 9 days to 7 hours.
  - Real-time communication:** Replaced a third-party vendor with custom real-time messaging, notification, and mobile push systems, eliminating recurring vendor costs.
  - Mobile and media:** Built a high-performance audio track player and fully custom UI running at 60 fps in React Native/Expo; authored a fast, efficient FFmpeg-powered watermarking solution.

**GeoAlert** Dec 2022 - Jun 2023  
Frontend Software Engineer Uzbekistan

- AI mapping platform for analyzing satellite and aerial imagery worldwide.*
- Geospatial interfaces:** Built and optimized React interfaces for large satellite and aerial imagery datasets, improving performance and usability across processing-job configuration and interactive image review.
  - Authentication:** Implemented Next.js authentication flows using Keycloak for centralized identity and single sign-on, helping move existing users to the new system with zero downtime.
  - Frontend architecture:** Simplified component state and data flow with React primitives and Zustand as part of replacing the legacy state-management system, improving maintainability.

**Livereach** Nov 2021 - Jan 2023  
Software Engineer Remote / EU

- Social content and analytics platform with shoppable feeds for brands.*
- Application modernization:** Led incremental React adoption within a complex Angular platform, preserving existing features and keeping user workflows working throughout the transition.
  - Embedded UI performance:** Improved load times and interaction performance in a data-intensive React app embedded in e-commerce sites across Europe. Built a lightweight reactive state manager from scratch to replace Redux, cutting the JavaScript bundle by 20%.
  - Release engineering:** Standardized shared-package delivery with a private npm registry on AWS and automated publishing across environments, modernizing release and integration pipelines for customer websites.

**Moishlem** Aug 2020 - Oct 2021  
Backend Software Engineer Remote / EU

- Online sports insurance with policies lasting from a day to a year.*
- Payments and operations:** Built payment and subscription workflows with banking APIs and NestJS backend, plus React tools for user management and customer support.
  - Backend consolidation:** Redesigned the PostgreSQL schema and consolidated two backends into one codebase, simplifying ongoing development and maintenance.

**Hitide** Dec 2020 - Feb 2021  
Software Engineer & Maintainer Remote / EU

- Online clothing brand.*
- Inventory automation:** Built and tested an Airtable-to-database pipeline that extracted and transformed inventory records, fully automating stock updates for the online store.

## PROJECTS

**LeTUI** 2025 - Present  
Rust, TypeScript

- Library and API design:** Built and published a terminal UI library from scratch, designed its developer-facing TypeScript component API, and implemented a Rust rendering engine with native binaries for macOS, Linux, and Windows.
- Rendering and developer experience:** Implemented persistent layout, incremental screen updates, scrolling, and input handling; stress-tested the library by fully reimplementing popular terminal UI applications to validate its capabilities and refine the developer experience.

**Xport** 2026 - Present  
TypeScript, React, PostgreSQL

- Product delivery:** Built and deployed a web app and command-line tool for exporting X threads, timelines, and articles to Markdown/JSON, with OAuth sign-in and Polar credit billing.
- Job reliability:** Designed PostgreSQL-backed background exports with saved progress, atomic job claims, and stale-job recovery, allowing interrupted work to resume without restarting.

## TECHNICAL SKILLS

- Languages**  
TypeScript, JavaScript, Go, Python, SQL, Rust
- Frontend**  
React, Next.js, Angular, React Native, Expo, Zustand, TanStack, Playwright
- Backend & data**  
Node.js, NestJS, Fastify, AWS, GraphQL, REST, PostgreSQL, Drizzle, Echo
- Cloud & tooling**  
AWS, Docker, Bun, Stripe, Git, Linux

## EDUCATION

Tashkent University of Information Technologies  
BSc in Software Engineering  
Tashkent, Uzbekistan  
Aug 2019 - Jul 2023  
GPA: 4.57/5
