Rustam Ashurmatov

Full-Stack Engineer — TypeScript, Node.js, AWS, React, Rust

Tashkent, Uzbekistan (UTC+5) | rr.ashurmatov.21@gmail.com | +998 90 917 0991 | frixaco.com | github.com/frixaco | linkedin.com/in/frixaco

SUMMARY

Full-stack engineer with 5+ years at startups, mostly remote for US and EU teams, strongest on backend, data and payments, with React/Next.js and React Native on the front end. On a 5-person team at a US music-tech startup, owns the backend, payments and AWS data pipeline for two products; cut a 1M-artist pipeline from 9 days to 7 hours and roughly halved its data-provider bill.

EXPERIENCE

Software Engineer, Vbrato & Ekko — May 2023 – Present
US music-tech startup: Vbrato (paid artist collaborations) and Ekko (paid song covers). 5-person team. — Remote (US)

- Rebuilt a sequential multi-step AWS Step Functions data pipeline as fan-out/fan-in: cut a full 1M-artist refresh from 9 days to 7 hours (~30x faster) and vendor API calls from 25M+ to 11M a month, roughly halving the provider bill.
- Built Ekko's backend, payments and media watermarking (custom FFmpeg build) in ~4 months after the 2026 pivot, and contributed heavily to its iOS app (screens, payments, polish) through App Store submission.
- Owned payments across backend, web and mobile: custom checkout, Stripe Connect creator payouts, Apple Pay, Google Pay and international bank payouts.
- Migrated 1M+ artist profiles and 100M+ metric records from MySQL to OpenSearch, behind GraphQL and REST APIs.
- Replaced a paid chat vendor with an in-house real-time messaging system (AWS AppSync GraphQL subscriptions, push notifications), saving about $6K a year.
- Built the Next.js web app from scratch, including its design system, and a custom React Native/Expo audio player.

Frontend Software Engineer, GeoAlert — Dec 2022 – Jun 2023
B2B AI mapping platform for satellite imagery; clients in Europe, the Middle East and Asia. — Tashkent, Uzbekistan

- Moved thousands of existing users to Keycloak single sign-on through new Next.js auth flows, with zero downtime.
- Owned the frontend for team accounts as the platform expanded to larger businesses: dashboards to invite members, assign roles and permissions, share projects and processing jobs, and track usage, quotas and billing.

Software Engineer, Livereach — Nov 2021 – Jan 2023
Social media aggregator for brands, plus an embeddable shoppable feed on e-commerce sites across Europe. — Remote (EU)

- Cut the embeddable feed's JavaScript bundle by ~20% by replacing Redux with a small custom reactive store; the widget runs on third-party store pages in carousel, list, masonry and slider layouts.
- Incrementally migrated a legacy Angular dashboard to React 18 (strangler fig), including its complex filters.

Backend Software Engineer, Moishlem — Aug 2020 – Oct 2021
Online sports and real-estate insurance. — Remote (EU)

- Built NestJS payment and subscription flows on banking APIs; merged two backends and redesigned the PostgreSQL schema.

PROJECTS

LeTUI — Rust, TypeScript, Bun — github.com/frixaco/letui | 2025

- Terminal UI library built from scratch (~10k lines): TypeScript component API with signal-based state over a Rust layout and rendering engine with cell-level diffing; prebuilt binaries for macOS, Linux and Windows.
- Averages 453 fps on full-screen animation (p99 frame 5.6 ms, M4 Pro), covered in a 3-part blog series.

Senmei — TypeScript, WebGPU, WebCodecs — senmei.frixaco.com | 2026

- In-browser MKV player from scratch: Matroska parser, WebCodecs decoding, HTTP Range streaming, seeking, track switching.
- Upscales 1080p anime to 4K in real time on WebGPU with Anime4K shaders ported to WGSL (32.3 ms per frame on an M4 Pro).

Xport — TypeScript, React (TanStack Start), PostgreSQL — xport.frixaco.com | 2025

- Paid web app and zero-dependency npm CLI that export X threads, timelines and articles to Markdown or JSON, with OAuth sign-in, Polar credit billing and Lighthouse scores of 99+.
- Crash-safe jobs save progress, cursors and credits to PostgreSQL after every page and resume after a crash.

SKILLS

Programming: TypeScript, JavaScript, Rust, SQL; working knowledge of Go and Python
Backend and data: Node.js, Bun, NestJS, Fastify, GraphQL, REST, WebSockets, PostgreSQL, MySQL, OpenSearch
Cloud: AWS (Lambda, ECS, SQS, Step Functions, AppSync, CloudFormation), Docker, CI/CD, Linux
Frontend and mobile: React, Next.js, React Native, Expo, TanStack, Angular, Zustand, Playwright
Payments and media: Stripe, Stripe Connect, Apple Pay, Google Pay, banking APIs; WebGPU, WGSL, WebCodecs, FFmpeg

EDUCATION

BSc Software Engineering, Tashkent University of Information Technologies, GPA 4.57/5 — 2019 – 2023

Languages: English, Uzbek
